

**WHAT CAN I PLANT  
 IN AUGUST?**

**In late July and in early August, start planting your fall garden. This is a reprise of your spring crop -- more lettuce, more spinach, more kale, Brussels sprouts, more cabbage. Plant a little deeper because the soil will be drier.**

Got Weeds?

Get Control

Weeding your lawn and gardens is a must this time of year. We recommend pulling weeds right after a good rain as it makes them easier to remove. Spraying weeds during drier periods is a good idea if time simply doesn't allow for pulling. Or better yet, contact our office for weed control services. Our maintenance manager Byron Phipps will be glad to assist you.

*Current Project*

We are excited to show off a renovation project that was several months in the execution. The second owners of this newly built home wanted to take the landscape to the next level. Tree removal, upgraded drainage features, an elevated turf area, circulation path, irrigation, lighting, and a fire pit are just a few enhancements that we incorporated into this extreme landscape makeover. The pics tell the story better than words. Many thanks to the new owners, the crew and all those involved in making this project a blue ribbon success!
